EXPERIMENT 10

Moving an Image Window from One Place to Another

AIM

To display an image and move its window from one position on the screen to another.

PROGRAM

```
import cv2

image = cv2.imread("image1.jpg")

cv2.namedWindow("Original Image")    # the window must exist before it is moved
cv2.moveWindow("Original Image", 100, 100)    # position (x=100, y=100)
cv2.imshow("Original Image", image)
cv2.waitKey(2000)                    # hold for 2 seconds

cv2.moveWindow("Original Image", 500, 300)    # moved to (x=500, y=300)
cv2.imshow("Original Image", image)
cv2.waitKey(0)

cv2.destroyAllWindows()
```

INPUT

image1.jpg (input image)

OUTPUT

The image window first appears at screen coordinates (100, 100). After two seconds it jumps to (500, 300) with the same image displayed. The output is the position of the window on the screen, so it cannot be captured as an image file.

RESULT

Thus the image window was successfully moved from one position on the screen to another using `cv2.moveWindow()`.
